

Software Architect Consultant – Commerce Payments

We are looking for experienced Software Architect Consultant that can recommend, advise, and enable our enterprise clients in making strategic design decisions to achieve best-in-class commerce payment solutions.

Candidate will be an integral part of designing and developing a framework for the creation or enhancement of a commerce system or solution for world-class enterprise clients.

Must have strong and diverse technical development background. Experienced in designing software using a multitude of languages and platforms and possess ability to solve complex technical challenges.

Responsibilities

- Collaborating with colleagues and clients to achieve optimal outcome in all phases of a commerce project
- Using "best-in-class" tools and methodologies to design, demonstrate, and validate a desired outcome
- Communicate clearly and effectively at all stages of a project to a multitude of client stakeholders, team members, and development team
- Oversee realization and configuration efforts directly related to technical design
- Provide technical guidance and coaching to team members
- Ensure work product meets all requirements

Requirements

- Proven experience as a Software Architect Consultant
- Experience in software development and coding in various languages and platforms
- Demonstrated capacity to quickly learn, adapt, and master multiple development tools
- Excellent knowledge of XML, XSLT
- Excellent knowledge of QA testing principles, including volume, load and performance testing
- Great attention to detail
- Outstanding communication Skills
- BS or Advanced Degree in Computer science, Engineering (or equivalent experience)
